^ “-” symbolizes the content being on GitHub.

Links are colored with the theme color (defaultly green). Note that no pop-ups are actual pop-up windows, but inside the site only.

Small changes is being made as I’m moving this document over to GitHub; <https://github.com/SpectralKH/Sylver/issues> <- up-to-date.

Not logged in

The pages below here is specific for when you’re not logged in.

-Global (applies to all pages)

The page should be white, and have a simple, understand-able theme.

Header: In the top corner, there’s a header, in the size of YouTube’s and light-gray. Starting with a sidebar button (more info below), then a logo (leading to homepage), followed by a search field (searching takes you to */search/keywords). After that, there’s something called the “Option bar” (more further down). On the right side, a “Login” button (*/login), followed by a “Register” button (*/register). The login button will open a pop-up where you type in login credentials, as well as a “Forgot password?” link (*/login/forgot). After that, but with more space between the login/register buttons, an “Upload” button, leading to */upload. The space between the search bar and whatever is on the right, will also be used for some options, specific for pages.

>>>	Logo	Search		Option bar	Login	Register
-----	------	--------	---	------------	-------	----------

Option bar: Located in the header (look above). It has a drop-down with various options, differs from page to page. The different links there leads to a sub-page, which is always pre-loaded (#videos for example), and it might be used for sorting.

Footer: The bottom includes somewhat important links and such. It starts with a logo, to the left (leads to homepage). Links are placed to the right there, 2 per column. There’s a “Customize” button, which opens a pop-up, and also takes you to a new link, so you can easily give others the link to it. Maybe something like */customize? Next, there’s “Help” (*/help), “About” (*/about), “Updates” (*/updates) and possibly “Developers” (*/developers) if the project is open-source. After that, we got “Contact” (/*contact).

Sidebar: Left side. Expandable by pressing the "sidebar button", located to the left of the logo in the sidebar. It opens a list, similar to YouTube. First, there’s Browse (AKA the homepage). Then, we have “Local playlist” (*/playlist/local). It’s a playlist that’s managed freely without requiring to log in, and it’s only stored on the user’s computer (offline). Below there’s a little spacer. Then, there’s a “Videos” title, followed by categories inside it (excluding music). Another spacer, then “Music”, listing the top 5 genres, then the sixth item displays “Show all”, which will add all genres to the list, sorted alphabetically, and make the sidebar scroll-able.

“Customize” pop-up:

The edit button will be an icon. Editing will show a list of available options. [] means it’s a button.

[Edit]	Language	English (US)
[Edit]	Theme color	Green
	Sidebar side	[Left] [Right]
	Profile info position	[Header] [Bottom sidebar]

Language changes the language of the site, obviously.

Theme color changes the main color of the site. Like many sites, this one has a main color (green), but it’s changeable. For example, YouTube has red.

Sidebar side changes the side where the sidebar is located. The button to show/hide the header will also be moved.

Profile info position controls where the login/-out/register buttons and avatar/name is located. “Header” will be as it is, but with “Bottom sidebar”, it will be placed in the bottom of the sidebar (yeah). The login and register buttons will be there if a user is logged out, with the “Upload” button above. When the user is logged in, the avatar and name will be placed here (avatar to the right). The upload button is at the same position, and the Activities button will be to the right of it.

Here’s how all the videos/tracks/channels will look.

The [+] buttons lets you add a video/track to a playlist. If you hover the button, a list of the playlists will appear (sorted alphabetically).

The [S] button is for sharing. It will have a share icon, not an S. Hovering it will open a list, which contains a few options; Channel, Copy link, Embed, Email, Facebook, Twitter.

The [Buy] button will bring one to a site specified by the creator (Only certain sites are approved. If there’s more than one, a list will appear). If the track is free, the button will show [Free download] instead, but only one site is approved here.

[👍] and [👎] are like and dislike buttons.

Clicking videos will lead to the video’s page. Same with channels. But with tracks, you can click the play button (which appears by hovering over the track picture) and the video will start playing instantly. If the track being displayed is in small mode, it will transform into large (by adding a spectrum and making the track picture bigger).

Video, small	Video, large.	Channel	Track, small.
[[+] [Thumbnail] [] My first video! by SpectralKH 549k views 2 months	[] Let’s Play: Some game [+] [] by SpectralKH [Thumbnail] 534 views - 5 hours - gaming [] So this is one video I made and it's [] awesome, this is a description.	[] [Avatar] [] SpectralKH [Subscribe 19k]	[Track] Artist 21 plays 16 minutes [picture] Sample loop I made for this label Melodic dubstep [] [👍 2] [👎 0] [+][Buy][S]
			Track, large
			[] Artist 21 plays 16 minutes [] Sample loop I made for this label Melodic dubstep [Track] [👍 2] [👎 0] [+][Buy][S] [picture] []

-Homepage

The homepage redirects to the Browse page, or a user-specified homepage, if a user is logged in. If not, it shows a modified version of the Browse page (still same address). It has a brief description of the site, and why people should create an account. It ends with buttons for logging in and registering. The login button will show a pop-up where you type in login credentials, as well as “Forgot password?” (*/login/forgot).

-Browse

Option bar: All (default) Videos (#Videos) Sound (#Sound) Channels (#Channels)

Box 1: Called “Trending”. Shows 3 rows; 1 with videos and 2 with songs. Both are scrollable horizontally. “Trending” links to */browse/trending.

Box 2: “Popular in <country>”. Displays what’s popular in the country the user is in.

Box 3: Popular channels.

More info on GitHub.

-Login

Pretty much like any login page. You have a email or username field, then the password field below. Below both of them, the login button is located. Then the text saying “Forgot password?” which leads to the /login/forgot page. And also you have the “Remember me” checkbox beside it. On the line below this, there’s text saying “Register”, which leads to the */register page.

-Login/forgot

Password recovery: Shows a little bit of text with info, and a text field below where you input your email. The button below says “Request password reset”, and it will send an email containing information and a generated link that will be used to set the user’s new password; */login/reset/<token>. This page will require you to type in your new desired password 2 times. After you’ve done that, you get redirected to the login page.

-Register

First, a username field. Then the email address, followed by password 2 times. Lastly, there’s a reCAPTCHA, then the “Register” button. The password has to be at least 6 characters long, and should have basic rules, and recommendations, for the password. When the button is pressed, an activation email will be sent to the email put in. After the link there is clicked, the user will be good to go with his account. It’s not possible to log in without the activation link being clicked. If you do, you’ll get to a page where you can choose to change the email used to register, or resend the activation email. If you make a new account with the same username or email as an unactivated account, the unactivated account will simply be deleted.

-Search

The option bar has the text “All | Video | Sound | Channels”. In search, both videos and tracks are in large mode. Otherwise, it’s simply a list of videos and tracks. The list has as many results per row as possible, it will automatically detect the size of the window and customize itself after that.

-Help

The page will simply show that there’s nothing there yet, and there will be a form below where you can ask questions. It has a topic (text field) and a message (text box).

-Contact

Firstly has a dropdown named Inquiry where you select your type of message. Can be Feedback or Help (default Help). Under that, there’s a Subject text field, and a Message text box following it.

Logged in

Here’s the new/different pages displayed when the user is logged in. Only changes will be listed.

-Global (applies to all pages)

Header: Removed login and register button. From the right, it displays the “Upload” button ([*/upload](#)). To the left, the account’s avatar, then the name. Also, an activities button ([*/activity](#), opens in new tab).
Sidebar: All items are removed, but “Browse”. Below it, “Subscriptions” ([*/subscriptions](#)), then “Statistics” ([*/statistics](#)). A spacer, then a list of playlists (sorted alphabetically).

Logout

Simply logs out the user, and redirects him to the homepage (if not he’s viewing content that doesn’t require a login).

Contact

No longer having the email field - the user logged in will be used. Answers goes to the user’s email, and appears in the activity.
